

How to Print Tiled Pages

Step 1: Open the PDF in Adobe Acrobat, click “File” and select “Print.”

Step 2: In the “Page Handling” pane, select “Tile large pages” or “Tile all pages” from the “Page Scaling” drop-down list. Note that if you choose the latter option, only pages larger than the paper size on which you are printing are tiled.

Step 3: In the “Tile Scale” field, set the size proportion at 100%. Optionally, provide an overlap value (inches or centimeters) and specify whether you want to include cut marks.

Step 4: Select the printer you want to use, set other print properties and options, as appropriate, and click “OK.”

Step 5: Choose your wall and place.

Note: Printing in tiled format will help avoid any gaps on visuals. Will require some manual alignment to match placement of graphics.
